MUDRA GOLD | MYMUDRAGOLD.IN

Website SEO Audit Report

On-page, technical, speed, indexing and local search review with prioritised fixes and ready-to-use rewrites

Website audited: https://www.mymudragold.in/
Date: 16 October 2026
Pages reviewed: Home, About, Services, Gallery, Testimonial, Contact

1. Executive Summary

Mudra Gold's website is live, secure (HTTPS) and already indexed by Google, which is a good foundation for a one-year-old business. However, the site is currently invisible for the searches that actually bring customers, such as "cash for gold in Gorakhpur" or "sell old gold near me". Every page has the same title ("Mudra Gold"), no page has a meta description, there is no sitemap or robots.txt, and there is no local business data for Google to connect the website to the three physical branches. The homepage also weighs around 4 MB and takes close to 3 seconds to start loading, which loses mobile visitors.

The good news: none of this requires a new website. The fixes below are mostly one-time changes that can be completed within two to four weeks and will directly improve how the site appears and ranks in Google search and Google Maps.

35	40	55	50	30
ON-PAGE SEO	TECHNICAL	SPEED & MOBILE	INDEXING	LOCAL SEO

Scores are indicative, out of 100, based on the checks listed in each section.

Top 5 priorities (do these first)

#	Fix	Why it matters	Effort
1	Write a unique title and meta description for every page (ready-to-paste text in Section 7)	This is the text customers see in Google results. Today every page just says "Mudra Gold".	1 hour
2	Add LocalBusiness schema with the correct branch addresses and phone number	Connects the website to Google Maps listings and "near me" searches.	1-2 hours
3	Create sitemap.xml and robots.txt, and submit the site in Google Search Console	Lets Google find and index all pages reliably and shows what people search before visiting.	1-2 hours
4	Fix name, address and phone consistency (two phone numbers and two emails are used) and update the branch list (the HN Singh Chauraha branch opened on 25 August 2026 but the site still says "COMING Soon")	Conflicting contact details hurt Google Maps ranking and customer trust.	2-3 hours
5	Compress the homepage (about 4 MB today; a single icon image is 1.5 MB)	Slow pages lose visitors and rank lower, especially on mobile data.	Half a day

2. On-Page SEO

Check	Status	What was found
Page titles	POOR	All six pages have the identical title "Mudra Gold" (10 characters). Google cannot tell the pages apart, and searchers see a bare brand name instead of a reason to click.
Meta descriptions	POOR	The description tag exists on the homepage but is empty on every page. Google therefore shows random scraped text (phone numbers and menu items) as the search snippet.
Headings (H1)	POOR	Homepage has five H1 tags ("How It Works", "What Our Customers Say", "Mudra Gold", etc.). Best practice is one H1 per page that names the page's main topic and location, e.g. "Sell Gold for Instant Cash in Gorakhpur". Footer items like "Mudra Gold" and "New Branch COMING Soon" should not be H1s.
Image alt text	FAIR	5 of 20 homepage images have no alt text. Alt text helps Google Images and accessibility. Several images also have messy file names ("logo (2).png", "step-01.png.png").
Homepage text content	FAIR	Roughly 450 words of visible text. Thin for a competitive local service. The words "Gorakhpur" and "cash for gold" barely appear in the main copy.
Social sharing tags (Open Graph)	MISSING	No Open Graph or Twitter Card tags. When the link is shared on WhatsApp, Facebook or LinkedIn, it shows no image or description preview. This matters because customers commonly share business links on WhatsApp.
Structured data (schema)	MISSING	No JSON-LD markup. Adding LocalBusiness schema (ready-to-paste code in Section 7) helps Google show address, phone, hours and ratings.

3. Technical Health

Check	Status	What was found
HTTPS / SSL	GOOD	Valid certificate (Sectigo), HTTP redirects to HTTPS correctly.
www vs non-www	ISSUE	https://mymudragold.in and https://www.mymudragold.in both load as separate 200 pages. Google sees these as duplicate websites. Redirect the non-www version to www (or the reverse) and add canonical tags.

robots.txt	MISSING	Returns a server error page (404). A missing robots.txt is not fatal, but its absence also means no sitemap is declared to crawlers.
XML sitemap	MISSING	No sitemap.xml exists. Google must discover pages on its own, which is unreliable for a small site.
Canonical tags	MISSING	No canonical tags on any page. Needed to settle the www/non-www duplication.
Broken resources	ISSUE	At least one referenced file returns 404 (a leftover "wp-content/themes" path from a WordPress theme the site was copied from). Broken files slow rendering and look careless to crawlers.
Page compression	ISSUE	The server sends the homepage uncompressed (gzip not enabled), so visitors download about 30% more data than needed.
Security headers	ISSUE	No HSTS or content-security headers, and the server broadcasts its software versions (Microsoft-IIS/10.0, ASP.NET). Minor, but easy to harden in Plesk.
Analytics	MISSING	No Google Analytics, Tag Manager or any visitor measurement detected. Without it there is no way to know how many people visit or which pages work.
Internal links	FAIR	Menu links still point to old ".aspx" addresses which then redirect (301) to the clean addresses. Link directly to the final clean URLs to avoid extra hops.

4. Speed and Mobile

Measure	Observed	Target
Time for the server to deliver the homepage	~3.0 seconds	Under 0.8 seconds
Total homepage weight	~4 MB, 60+ files	Under 1.5 MB
Largest single image	1.5 MB PNG (an icon)	Under 150 KB
Mobile layout (viewport)	Present	Present
Duplicate libraries	3 versions of jQuery and 2 versions of Font Awesome load together	One version each

What to do: convert the large PNG/JPEG images to WebP and resize them to display size (the 1.5 MB icon alone would cut the page weight by a third), enable gzip compression and browser caching in Plesk, remove the two extra jQuery versions and the duplicate Font Awesome, and add lazy loading so below-the-fold images load only when scrolled to. These changes alone should bring the homepage under 1.5 MB and noticeably improve rankings on mobile searches.

5. Indexing and Crawlability

- The homepage is indexed by Google, but the search listing shows only the bare title "Mudra Gold" with auto-picked text, because no description exists.
- With no sitemap, there is no guarantee the About, Services, Gallery, Testimonial and Contact pages are all indexed. Setting up Google Search Console (free) will confirm this and show the exact queries people use before clicking.
- Action: generate sitemap.xml, reference it from robots.txt, submit it in Search Console, and request indexing for each page after the new titles and descriptions are live.

6. Content and Local SEO

For a cash-for-gold business, almost every customer search is local ("gold buyer near me", "cash for gold Gorakhpur"). Local presence is therefore the highest-value area to fix.

- **Contact details conflict.** The site uses two phone numbers (+91 96213 19818 and +91 9554489818) and two email addresses (info@mymudragold.in and mymudragold@gmail.com). Pick one primary phone and email and use it identically on the website, Google Business Profile, Facebook, Instagram and LinkedIn. Consistent name-address-phone data is a core Google Maps ranking factor.
- **Branch information is outdated.** The third store at HN Singh Chauraha, Gorakhpur opened on 25 August 2026 (announced on LinkedIn), but the homepage still shows "New Branch COMING Soon" and

the Contact page lists only the Civil Lines (Gorakhpur) and Arjunganj (Lucknow) addresses. List all three branches with full addresses and a Google Maps embed for each.

- **Address wording differs across the web.** Listings describe the Gorakhpur branch as Betiahata Road / Shastri Chowk while the website says Civil Lines, in front of St Andrew's Inter College. Standardise one written address everywhere.
- **Google reviews are an untapped strength.** The Gorakhpur listing already carries positive 5-star customer reviews. Featuring these on the homepage (with the reviewer's first name) and replying to every review on Google improves both ranking and conversion.
- **Brand-name conflict.** A separate website at mudragold.co.in also operates under the name "Mudra Gold". Confirm whether it belongs to the business; if not, note it for brand protection, as customers and Google may confuse the two.
- **Content opportunities.** A simple FAQ / blog answering "What is today's gold rate in Gorakhpur?", "How is old gold valued?", "What documents do I need to sell gold?" and a page explaining the Swarn Vriddhi gold coin plan would capture searches with zero competition locally. A live gold rate widget is also a strong reason for customers to return to the site.

7. Ready-to-Use Rewrites

Paste these directly into each page. Titles are kept within Google's display limits.

```

8. Keyword Opportunities

These are the searches most likely to bring walk-in customers. None of them require paid ads; the current site simply does not mention them.

Search phrase to target	Where to use it	Notes
cash for gold in Gorakhpur	Homepage title, H1, first paragraph	Core money keyword; near-zero local competition with an optimised page.
sell old gold in Gorakhpur / gold buyer near me	Homepage + Contact page	Driven heavily by Google Maps; depends on the Section 6 fixes.
cash for gold in Lucknow	A dedicated Lucknow branch section on Contact or its own page	The Arjunganj branch currently has no page targeting Lucknow at all.
today gold rate in Gorakhpur	A daily gold rate page or widget	Very high search volume; brings repeat visitors who then see the selling offer.
gold coin purchase plan / monthly gold scheme	Swarn Vriddhi section	The 11+1 instalment plan is a strong product with almost no text describing it today.
how to sell gold / documents needed to sell gold	New FAQ section	Builds trust and captures people early in their decision.

9. Action Plan

Timeline	Work items
Week 1	Apply the new titles and meta descriptions (Section 7). Fix the duplicate www/non-www version with a redirect and canonical tags. Compress the 1.5 MB icon and other large images. Fix the broken image file. Update the branch list to include HN Singh Chauraha and remove "COMING Soon".
Week 2	Add LocalBusiness schema. Create robots.txt and sitemap.xml. Set up Google Search Console and Google Analytics, submit the sitemap, request indexing. Standardise phone, email and address across the website and all social profiles.
Weeks 3-4	Enable gzip and caching in Plesk, remove duplicate jQuery and Font Awesome, add lazy loading. Add Open Graph tags so WhatsApp shares show a logo and description. Point menu links directly at the clean URLs.
Ongoing	Publish one FAQ/blog post per week (gold rate, valuation process, documents needed). Ask every happy customer for a Google review and reply to all reviews. Add the Swarn Vriddhi plan details as a full page. Check Search Console monthly for new queries and indexing issues.
